

# New Entrance, Basement Tanking & Under Pinning

**East HamTown Hall**

**June 2019**

**Project Value £180K**

The main entrance to East Ham Town Hall was in urgent need of repair and EPC were contracted to carry out this project. The area was sensitive because of its location which was adjacent to a secondary school and the entrance had to remain in use.

After the existing walls were underpinned they were water proofed and tanked.

Our specialist craftsmen then built new stone stairs with decorative stone cappings and rebuilt the walls to match the original. Finally we installed new handrails, road and drainage finished with exterior lighting.

The whole project was a phased operation to allow the building to remain in use.
