

Pain Clinic Refurbishment

St Michaels Hospital

June 2021

Project Value £150K

The Pain Clinic which is located in the St Michaels Hospital site, needed to be re-located to another part of the Trust. This involved the isolation of the existing services and a soft strip out of all the existing finishes. The new location was fully fitted out by Every Project Counts Ltd with new IPS units and wash stations, Whiteroc hygienic cladding, electric and mechanical full fit out, new vinyl flooring and doorsets.

The programme was limited to just 8 weeks which meant our project team had extensive planning before commencement to ensure a 'just in time' delivery schedule was achieved.

The areas were occupied with patients and staff and our team liaised with the estates and facilities team to carefully isolate services and protect existing finishes to ensure patient care was not interrupted.

The project completed on time and budget with the high quality finishes that were achieved was testimony to the teams hard work and careful planning.

The finished project was outstanding and something that everyone involved with including client, designer and contractor were very proud to be a part of.
