

Portway Primary School
New Unisex Staff Toilets
Summer 2021
Project Value £25K

This challenging project involved the removal of asbestos ceiling tiles, the demolition of an existing partition wall between the mens and women's toilets and the introduction of steel beams to support the roof above. The floor area was the levelled throughout and a new tiled floor installed. Because of the sensitive nature of installing unisex toilets it was decided to install full height cubicles and partitions along with soundproofing. Additionally we added a disabled/ abulant toilet to comply with current regulations. Our design team worked with the head teacher to create the final high quality design, fixtures and fittings. The final result fulfilled the brief of being high quality 'corperate feel' and was greatly appreciated by the staff.
