## Spring Hill Tower Roof Replacement

Client: Harlow Council

Value: £200K

The Spring Hills Tower roof replacement was delivered during the challenging period of the national lockdown. Despite these unprecedented circumstances, EPC introduced robust safety measures to protect both residents and the project team, ensuring that works progressed smoothly with no reported Covid-19 cases and no time lost due to the pandemic.

Given the complexity of the high-level works, meticulous planning and close coordination were essential. Particular attention was given to resident access and the careful replacement and reinstatement of satellite systems. To keep the community fully informed, EPC hosted a presentation outlining the scope of works and potential impacts on residents and the surrounding environment. This was followed by a dedicated Q&A session, which was very well received and fostered a positive, collaborative atmosphere.

The quality of workmanship was recognised by Harlow Council, who praised both the standard of delivery and the professionalism of EPC's project management team. The project was successfully completed on programme, on budget, and without accidents or near misses, a clear reflection of the commitment and careful planning demonstrated by the whole EPC team.
